## Tips on Navigating the Codebook

The Annual Provider (APR) Transformed Medicaid Statistical Information System (T-MSIS) Analytic File (TAF) research file is an annual file that Centers for Medicare & Medicaid Services (CMS) creates from the monthly state submitted provider data. Each annual APR file includes information about the providers that are authorized to render services to Medicaid and Children's Health Insurance Program (CHIP) beneficiaries. There is a record for each Medicaid and CHIP provider who has effective and end dates from the provider attributes main segment that include any month during the calendar year.

Each APR TAF contains several files — the “Base” or core/primary file, and eight supplemental files 1) taxonomy, 2) enrollment, 3) affiliated groups, 4) affiliated programs, 5) location, 6) license, 7) identifiers, and 8) bed type. All files can be linked together using unique keys that are constructed based on various data elements. Providers do not necessarily have records in all of the supplemental files.

This document is a detailed codebook that describes each variable in the TAF APR research files. Because the files have such a large number of variables, we have included several ways for users to quickly find the information they need:

- A complete listing of all variables in the files, in alphabetical order based on their SAS variable names.
- Individual entries for each variable that contain a short description of the variable, the possible values for the variable, and, in many cases, notes that discuss how the variable was constructed and should be used.

We have included hyperlinks throughout the codebook to make it easier for analysts to navigate between the table of contents and the detailed entries for the individual variables:

- Clicking on any variable name in the Table of Contents will take you to the detailed description for that variable.
- From the detailed description for any individual variable, clicking on the ^Back to TOC^ link after each variable description will take you back to the Table of Contents.

## Table of Contents

This section of the codebook contains a list of all variables in alphabetical order based on the SAS variable name.
